

JAWHER KHIARI

Forward Deployed Engineer | Specialized in developing and deploying SaaS systems

Full Stack Engineer at [Ceel.io](#) | US governance, risk & compliance (GRC) SaaS | San Francisco, USA
.NET | Angular | PostgreSQL | Kubernetes | AWS | CI/CD | Application Security

Tunisia · +216 20 062 812 · jawherk76@gmail.com · [LinkedIn](#) · [GitHub](#)

Portfolio: jawher-khiari.github.io · CarSpare: carspare.autos

PROFESSIONAL SUMMARY

Forward Deployed Engineer specialized in developing and deploying SaaS systems end to end, from requirements and architecture to integrations, CI/CD, Kubernetes and production. 3+ years of experience, 1 year of daily AI-assisted development with Claude Code and Codex using custom skills, and a security background (penetration testing, CAPT).

Ceel.io (San Francisco, USA · remote, since 2023): a US governance, risk and compliance (GRC) automation company. Its platform helps companies achieve and maintain certification across 21 frameworks (SOC 2, ISO 27001, HIPAA, PCI DSS, GDPR, NIST CSF and more): it connects to their cloud, code, identity, HR and device systems, continuously tests security controls, manages policies, people, vendors and risks, and keeps audit-ready evidence for auditors and customers. I single-handedly built the Trust Center and Trust Portal, third-party integrations, background checks, device monitoring (Jamf, CEEL Agent) and user onboarding/offboarding, and I own access and authorization for every platform role.

CarSpare: solo founder of a multi-portal SaaS marketplace for car spare parts that I designed, built and deployed alone.

TECHNICAL SKILLS

Backend	C#, .NET 6 / 8 / 9, ASP.NET Core Web API, Entity Framework Core, Role- & Policy-Based Authorization, JWT & refresh tokens, Hangfire, SignalR, AutoMapper, REST API design, Python (Flask)
Frontend	Angular 14 → 21, Angular Signals, NgRx Signals, TypeScript, RxJS, PrimeNG, Tailwind CSS, Bootstrap, shadcn-style component libraries, ngx-translate
Data & Infra	PostgreSQL, Redis, Docker, Kubernetes (k3s, Kustomize), GitHub Actions CI/CD, AWS (S3, Lambda, Secrets Manager, STS, Parameter Store), Cloudflare (Tunnel, Turnstile), Seq / Serilog, Linux
Integrations	Jamf Pro API, Certn, Unified.to, Microsoft Graph, Google Workspace Admin SDK, GitHub Apps, OAuth 2.0, API keys, signed webhooks, encrypted credential storage
Security	Penetration testing, OWASP, CVE / CWE analysis, Burp Suite, Metasploit, Nuclei, Nmap, FFUF, Hydra, Enum4linux, Aircrack-ng, WhatWeb, Trivy
Testing & Practice	xUnit, Moq, integration tests on real PostgreSQL, Git, code review, technical documentation, Agile delivery
AI Development	1 year of daily AI-assisted development: Claude Code and OpenAI Codex with custom skills and agent workflows, MCP servers, Cursor, Google Antigravity, GitHub Copilot

PROFESSIONAL EXPERIENCE

Full Stack Engineer & Penetration Tester Oct 2023 – Present

Ceel.io (formerly Socurely) — US governance, risk & compliance (GRC) SaaS San Francisco, CA, USA · Remote
Core engineer across the platform's customer-facing modules, integrations, device monitoring and access control.

- **Trust Center & Trust Portal (sole developer):** built the customer-facing Trust Center where companies publish compliance reports, security documents, policies, subprocessors, FAQs and live monitoring status, with public/private visibility per item, custom domains and publishing. Built the gated Trust Portal for their clients: access requests granted for the whole center or per item with expiry dates and email notifications, passwordless email-OTP login, and Redis-backed per-email and per-device logout.
- **Integrations (sole developer):** owned the integrations module, a generic integration model with encrypted credentials (OAuth tokens, API keys, webhook secrets) and a single connect-and-test flow. Connected cloud accounts (AWS role assumption, GCP, Azure), code platforms (GitHub App, GitLab, Bitbucket, Azure Repos), ticketing tools (Jira, Asana, Trello and more), identity providers (Google Workspace, Microsoft 365) and HR, access-review and CRM systems through Unified.to.
- **Background checks (sole developer):** integrated Certn end to end: candidate invitations with selectable check types (US criminal tiers, international), signature-verified webhooks, status sync, and automated evidence for employee and contractor screening controls.
- **Device monitoring with Jamf & CEEL Agent (sole developer):** built the backend for the CEEL endpoint agent (Windows, macOS, Linux) and the Jamf integration: OTP-based agent authentication, device registration as hardware assets, and posture reporting (disk encryption, screen lock, firewall, antivirus, password manager, auto-updates) feeding 12 automated control tests, with new-hire grace periods and per-person exclusions.

- **User governance (sole developer):** built personnel onboarding and offboarding flows and the onboarding steps in the employee (user-role) portal: policy acceptance, security training, MFA, agent installation and background check, plus offboarding checks that verify accounts were removed across connected systems.
 - **Automated control tests:** contributed Hangfire jobs to a library of 450+ automated tests that evaluate framework requirements daily for each customer, update control readiness and push results to the UI in real time with SignalR.
 - **Access control ownership:** responsible for verifying access and authorization for every platform role (11 roles spanning customer admins, compliance and governance users, auditors, the device agent and Trust Portal visitors) across 500+ API endpoints, the tenant-isolation policy and Angular route guards.
 - **Platform migration:** led the upgrade from .NET 6 to .NET 8 and Angular 14 to Angular 20, moving front-end state to Angular Signals; refactored hand-written access checks into ASP.NET Core policies, cutting response times by ~20% on affected endpoints.
 - **Security testing:** ran 2 internal penetration tests (Metasploit, Nuclei) and enforced secure-coding practices: server-side authorization as the enforcement layer, route guards and input validation on the client.
- Stack:** .NET, EF Core, PostgreSQL, Redis, Hangfire, SignalR, Angular 20 (Signals, PrimeNG, Tailwind), AWS (S3, Lambda, Secrets Manager, STS), Seq.

Software Engineer Intern — Vulnerability Scanner Platform (VSP)

Feb 2023 – Sep 2023

Ceel.io — San Francisco, CA, USA

Remote

- Designed and built a B2B vulnerability-scanning platform from scratch (Angular, .NET, PostgreSQL, Flask): customers enter a domain and receive an auto-generated report, plus dependency scanning and a 12-hour CVE feed.
- Automated reconnaissance and fuzzing (Nmap, Nikto, WhatWeb, FFUF) and built the reporting engine that maps every finding to CVE and CWE identifiers, with reports stored on S3.

FOUNDER PROJECT

CarSpare — Founder & Sole Engineer

Jun 2026 – Present

[carspare.autos](#) — B2B2C marketplace for car spare parts

Solo project

Built and deployed alone a multi-portal marketplace: seller companies manage stock and staff, buyers search parts by vehicle or OEM reference and check out, and admins manage sellers and paid features.

- **Architecture:** .NET 9 Web API (Controller → Service → Repository, read-replica DbContext, company-scoped multi-tenancy, per-company feature flags); buyer and seller apps in Angular 21 with NgRx Signals, Tailwind CSS 4 and a shared component library.
- **Product search:** unified part search across local stock, OEM references and the TecDoc catalog, with vehicle fitment by brand, model and engine; Elasticsearch buyer search in progress (index projection for 100k+ products, exact SKU/OEM/EAN ranking, PostgreSQL as source of truth, Hangfire-driven index sync).
- **CSV import with AI column matching:** bulk catalog import (up to 50k rows) where an LLM proposes how supplier columns map to product fields, with confidence thresholds and seller review before publishing.
- **Order integrity:** optimistic concurrency (PostgreSQL xmin row versions, Serializable transactions, 409 on conflict) so two buyers can never both purchase the last unit in stock; Idempotency-Key on every business write so retried or double-submitted actions run exactly once.
- **Abuse protection:** browser fingerprinting (FingerprintJS) to identify unique devices and users, with Redis-backed rate limiting and lockouts per account and per device for login, OTP, SMS and MFA attempts, plus Cloudflare Turnstile.
- **Authentication:** MFA with authenticator apps (TOTP), JWT with refresh-token rotation, Google OAuth per portal, SMS verification and field-level AES encryption of sensitive data.
- **DevOps & quality:** k3s Kubernetes with Kustomize staging/prod overlays, Cloudflare Tunnel, nightly backups to S3; GitHub Actions pipeline running 640+ xUnit tests, Trivy image scans, versioned deploys with rollback.

EDUCATION

National Engineering Diploma in Computer Science

National Engineering School of Sousse (ENISo) · 2019 – 2023

Equivalent to a Master's degree

Preparatory Cycle for Engineering Studies

Preparatory Institute for Engineering Studies of Nabeul (IPEIN) · 2017 – 2019

LANGUAGES

Arabic — Native · French — Intermediate (B1) · English — Intermediate (B1)

CERTIFICATIONS & TRAINING

- **Certified Associate Penetration Tester (CAPT)** — Hackviser (ID HV-CAPT-AK196SVO)
- **Developing Secure Software (LFD121)** — The Linux Foundation
- **Linux Fundamentals** — Hack The Box Academy (training module)
